JOB DESCRIPTION

Java Backend Engineer

Company: Corvex Financial Technology (fictional)
Location: Chennai / Hybrid
Experience: 2-4 years

About the role

Corvex builds payment and lending platforms used by regional banks. We need a Java Backend Engineer to develop secure, high-volume microservices and help us move faster with better automation.

Responsibilities

- Design and develop microservices using Java and Spring Boot.
- Build and document REST APIs, and secure them with Spring Security and JWT.
- Work with MySQL or PostgreSQL using Hibernate and JPA, and tune slow queries.
- Process events with Kafka or another message queue.
- Write unit and integration tests using JUnit and Mockito.
- Maintain build and release pipelines with Maven and Jenkins.
- Review code, join daily stand-ups and take part in Agile sprints.

Required skills

- Strong Java (8 or above)
- Spring Boot and microservices architecture
- Hibernate / JPA and SQL
- REST API design
- Git and Maven
- JUnit and Mockito

Good to have

- Kafka
- Redis or other caching tools
- Docker
- Jenkins or other CI/CD tools
- Swagger / OpenAPI
