JOB DESCRIPTION

Data Scientist

Company: Quantia Labs (fictional)
Location: Pune / Hybrid
Experience: 1-3 years

About the role

Quantia Labs helps retail and telecom companies predict customer behavior. As a Data Scientist you will build models, test ideas quickly and explain results to business teams.

Responsibilities

- Explore and clean data using Python, pandas and SQL.
- Build machine learning models for classification, regression and forecasting with scikit-learn.
- Work on natural language processing (NLP) problems such as text classification and topic discovery.
- Train deep learning models with TensorFlow or PyTorch when needed.
- Apply statistics and run experiments to validate model performance.
- Present findings and recommendations to non-technical stakeholders.
- Work with engineers to deploy models as APIs.

Required skills

- Python, pandas and NumPy
- SQL
- Machine learning with scikit-learn
- Statistics and feature engineering
- Data visualization (matplotlib or similar)
- Good communication skills

Good to have

- NLP
- TensorFlow or PyTorch
- MLflow or other experiment tracking tools
- Docker and Flask or FastAPI
- Jupyter notebooks
